

Open tender request RFQ-ARER-26-014

RFQ-001 · Version 1.0 · 2026-07-06 · Procurement Office · approved

RFQ-001 §1.1 — The Institute invites a fixed-price offer for one Advanced Retro-Encabulation Reliability Platform, ARER-300, for semiconductor packaging research. The bid shall include every mandatory item in RFQ-002 to RFQ-004.

RFQ-001 §2.1 — Issued 6 July 2026. Written clarification questions are due 14 August 2026. Tenders close at 17:00 Singapore time on 28 August 2026. Procurement issues any binding change as a numbered formal addendum before close; RFQ-006 records issued addenda.

RFQ-001 §3.1 — Submit a signed main response, technical compliance schedule, commercial schedule, implementation plan and service schedule. Quotes shall state Singapore dollars excluding GST and identify GST separately. Alternative or future unpriced options do not satisfy a mandatory requirement.

RFQ-001 §4.1 — Every mandatory requirement M1–M7 must pass before weighted evaluation. A clarification may explain an existing tendered commitment, but a conditional email, expectation or pending approval is not an amendment. A material change must be received as a formal revision accepted into the tender record by close.

RFQ-001 §5 Procurement objective and offer basis

RFQ-001 §5.1 — The Institute seeks one integrated platform capable of controlled combined-stress testing and local retention of research data. Bidders should price the configuration they will actually supply and explain which components are standard, which are mandatory options and which are optional research accessories. The proposal must let evaluators connect technical claims to the commercial and service schedules without assuming a later purchase or modification.

RFQ-001 §5.2 — The contract price for comparison includes the delivered instrument, mandatory options, installation, Site Acceptance Test, operator training and the required service period. A bidder may identify optional accessories in a separate section, but these are excluded from the submitted evaluated price only when they are unnecessary to meet all mandatory requirements. The bidder remains responsible for resolving internal inconsistencies among its own signed schedules.

RFQ-001 §6 Submission and document control

RFQ-001 §6.1 — Each response should name an authorised signatory and carry a consistent tender identifier, version and date. The five requested components are to be read together as the bidder's submitted offer. A statement in the covering response does not silently override a more specific signed service or technical appendix; an exception should be stated and priced clearly. The procurement record preserves the file as received at closing.

RFQ-001 §6.2 — Questions should be sent to the procurement contact by the clarification deadline. Replies may direct bidders to a formal addendum where a requirement changes for the tender. Bidders should acknowledge numbered addenda in their response. After close, informal explanations may help identify what the submitted words meant, but a new price, warranty term or

capability would require the applicable formal process and cannot be assumed from correspondence.

RFQ-001 §7 Delivery and acceptance

RFQ-001 §7.1 — Bidders should set out a realistic sequence from factory release to delivery, installation, operator training and Site Acceptance Test. The SAT record should identify the installed configuration and demonstrate simultaneous specimen operation across the required control ranges, raw-data export, event logging and operator handover. Open items should have an owner and resolution date; acceptance should not be inferred from shipment or installation alone.

RFQ-001 §7.2 — The delivery plan must account for site access and normal coordination with Institute staff. The supplier should state any Institute dependency early enough to be scheduled. A dependency may explain a plan, but it does not shift a firm submitted SAT date unless the tender record is formally changed.

RFQ-001 §8 Evaluation and authority

RFQ-001 §8.1 — The panel checks mandatory requirements first, recording a source and locator for each pass or fail. Only bids that satisfy the gate proceed to the weighted criteria in RFQ-005. The panel then makes a recommendation with a traceable calculation and unresolved matters clearly labelled. Finance verifies the budget treatment, procurement reviews process and the Executive Approval Committee decides whether to approve an award.

RFQ-001 §8.2 — The issued RFQ and its formal addenda define the tender requirements. The signed proposal and any formally accepted pre-close amendment define a bidder's commitment. Clarification correspondence, evaluation workbooks, dashboards and draft memos have different purposes and must not be treated as interchangeable sources of contractual authority.

RFQ-001 §9 Response organisation and traceability

RFQ-001 §9.1 — Bidders are requested to make their submitted configuration easy to reconstruct from the five response components. The covering response should identify the offered instrument and the schedules that define its technical, delivery, commercial and service particulars. Where the bidder uses an internal product label or commercial shorthand, it should explain how that label maps to the RFQ requirement. Evaluators will use the submitted text and signed appendices, so references to a website or future discussion should supplement rather than replace the response.

RFQ-001 §9.2 — A compliance statement is most useful when it states the actual offered value and the document in which the commitment is fixed. For capacity, the response should distinguish simultaneous positions from daily throughput. For export, it should describe raw measurements and event history rather than only a chart or dashboard. For price, it should reconcile the quoted line items with the offered configuration. For service, it should identify the start basis, final covered date, maintenance cadence and response undertaking in the submitted schedule.

RFQ-001 §9.3 — The Institute will retain the submitted files as a versioned tender record. If a bidder later explains terminology, the clarification record should point back to the original passage being explained. If the bidder seeks to change a material obligation before close, the change must be submitted through the process described in this RFQ. Reviewers should be able to tell from the archive which terms were offered by the closing time without relying on recollection of meetings or calls.

RFQ-001 §10 Acceptance record and practical coordination

RFQ-001 §10.1 — The Institute will coordinate reasonable access to the prepared installation area and nominate staff for training and witnessed testing. Bidders should state the site information they need, the sequence of checks they expect to perform, and any normal safety or utility dependency. Such practical coordination supports a credible plan; it does not replace the bidder's firm submitted completion date. Any issue identified during installation should be recorded with a proposed action and owner.

RFQ-001 §10.2 — The Site Acceptance Test should produce a reviewable record of the installed configuration and observed performance. The test may use representative specimens or simulator loads, provided the record demonstrates the supplied position count, operating controls and export function relevant to the tender. The team should retain a sample raw file and event record with the signed procedure. A reported factory result is useful background, while the site record establishes what the Institute received.

RFQ-001 §11 Decision paper and follow-up

RFQ-001 §11.1 — The evaluation paper should show the mandatory result for each offer, then the weighted comparison for offers that remain eligible. It should identify the source location for each material value and explain any interpretation or calculation needed to reach the decision. An uncertainty should be carried to the named process owner with a due date or escalation route. The panel's recommendation is one input to the human approval step; it is not itself a purchase commitment or permission for informal bidder negotiation.

RFQ-001 T2

Record	Contents to retain	Purpose
Tender submission	Signed response and schedules	Establish offered terms
Clarification file	Question, reply, date and status	Explain record
Acceptance pack	Installed configuration, test and training	Evidence of handover
Evaluation file	Gate sheet, score calculation and sources	Support decision review

Fictional training case; all people, organisations, products, rules and events are invented. This is not organisational policy or Singapore procurement law.
