Row | Requirement | RE-300 response

7-01 | Deliver run positions | 52

Configuration and measurement record

The RE-300 provides individually identified positions within a shared environmental profile. Meridian's profile beside measured values and flag interrupted runs for review. The laboratory can retain the name of the position and the channel identifier in the exported record. The controller associated with the position is associated with a channel identifier in the exported record. The controller associated with the position is associated with a channel identifier in the exported record. The controller associated with the position is associated with a channel identifier in the exported record.

CSV and JSON exports can be saved to the Institute's local storage without an ongoing hosted account. The operator guide covers time stamp format, units, channel identifiers, event codes and file naming. During the export process, the operator should review the data and ensure that the data is correct. The operator should review the data and ensure that the data is correct. The operator should review the data and ensure that the data is correct.

For the delivered RE-300, each specimen position is given a channel identifier before a controlled run. The operator should review the data and ensure that the data is correct. The operator should review the data and ensure that the data is correct. The operator should review the data and ensure that the data is correct.

At acceptance, a representative runs should exercise the installed reliability platform, export a raw file record can be linked back to a position and timestamp. The operator guide should show which fields i
