

Evaluation panel working notes

EVAL-003 · Version 0.9 · 2026-09-03 · Evaluation Panel · evaluation

EVAL-003 §1 — Peregrine's two-run explanation does not meet M3's simultaneous per-run capacity. Aperture's strong technical offer is outside both price and SAT mandatory limits. Meridian and Helix are complete offers with clear project-end service.

EVAL-003 §2 — Northstar's proposed service alignment appears administratively pending. The panel spreadsheet currently treats the requested project-end date as available, subject to procurement record check. This working note is not evidence of acceptance or a formal amendment.

EVAL-003 §3 — If a mandatory source remains unresolved, procurement should settle documentary status before an executive decision. The panel's arithmetic assumes its gate inputs are valid.

EVAL-003 §4 Panel review context

EVAL-003 §4.1 — The panel considered all five submissions against the same mandatory schedule. Technical capacity, data portability, installation and support were checked from the signed appendices. Where a bidder used a commercial or operational phrase that differed from the RFQ's wording, the panel sought an explanation through procurement. The notes capture working impressions made during review and may be superseded by the final source reconciliation.

EVAL-003 §4.2 — Peregrine's compact configuration was attractive on price and site footprint, but the panel recorded its one-run capacity separately from proposed daily throughput. Aperture offered the largest chamber and detailed logging, with a longer integration plan and higher quoted amount. Meridian and Helix offered different balances of price, capacity, delivery and service intensity; their criterion scores reflect those trade-offs as documented in the workbook.

EVAL-003 §5 Items for record closure

EVAL-003 §5.1 — Before the paper goes to leadership, procurement should confirm which clarification messages explain an existing offer and whether any formal revised schedule was accepted before the closing time. Finance should verify the line-item totals and GST treatment. The panel should then confirm that the gate sheet and weighted comparison refer to the same version of each submitted offer. An unresolved item should be described with its source and responsible reviewer rather than silently converted into a pass.

EVAL-003 §5.2 — The working score sheet is useful for checking arithmetic, but a ranking produced from an incorrect gate label would not settle eligibility. Once the record is closed, the recommendation should show the remaining eligible set, the calculated totals for that set and the conditions for any later approval. These notes are a discussion record and do not alter a bidder's tendered terms.
